REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art does not teach or fairly suggest furnaces for heating glass sheet as claimed utilizing burners and gas distributors as claimed such that the burner outlets are spaced from the gas distributor inlets. Likewise, the prior art does not teach or fairly suggest methods of heating glass sheets as claimed wherein a heating chamber through which the glass sheets are conveyed is supplied with products of combustion from gas burners at a location intermediate the side walls and mixed products of combustion and spent recirculating gas are drawn into hot gas distributors together.
2. The closest prior art references are the Kormanyos and Lewandowski patents cited in the applicant's specification. All of those references disclose mixing chambers situated within the heating chamber to draw spent recirculating gases first into the mixing chamber inlets at one side of the heating chamber and then accept burner combustion product gases inside the mixing chamber where the burner outlets are positioned. This results in cooler spent recirculating gases constantly flowing to one side of the heating chamber thus making one side of the heating chamber cooler than the other side. It would not have been obvious to remove the mixing chambers of the prior art because they were taught to be essential for the operation of the prior art methods and apparatus.
3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
